

THERE IS NO TOMORROW

BY JOHN THREAT

THERE IS NO TOMORROW

The world we know is over. Deal with it.

We have passed the point of no return for reducing carbon emissions to stop a runaway hothouse Earth scenario. The signs are all around us of a massive collapse in human society.

Ecological, Politically, Economically, Socially.
The Totality. Scientists are scared.

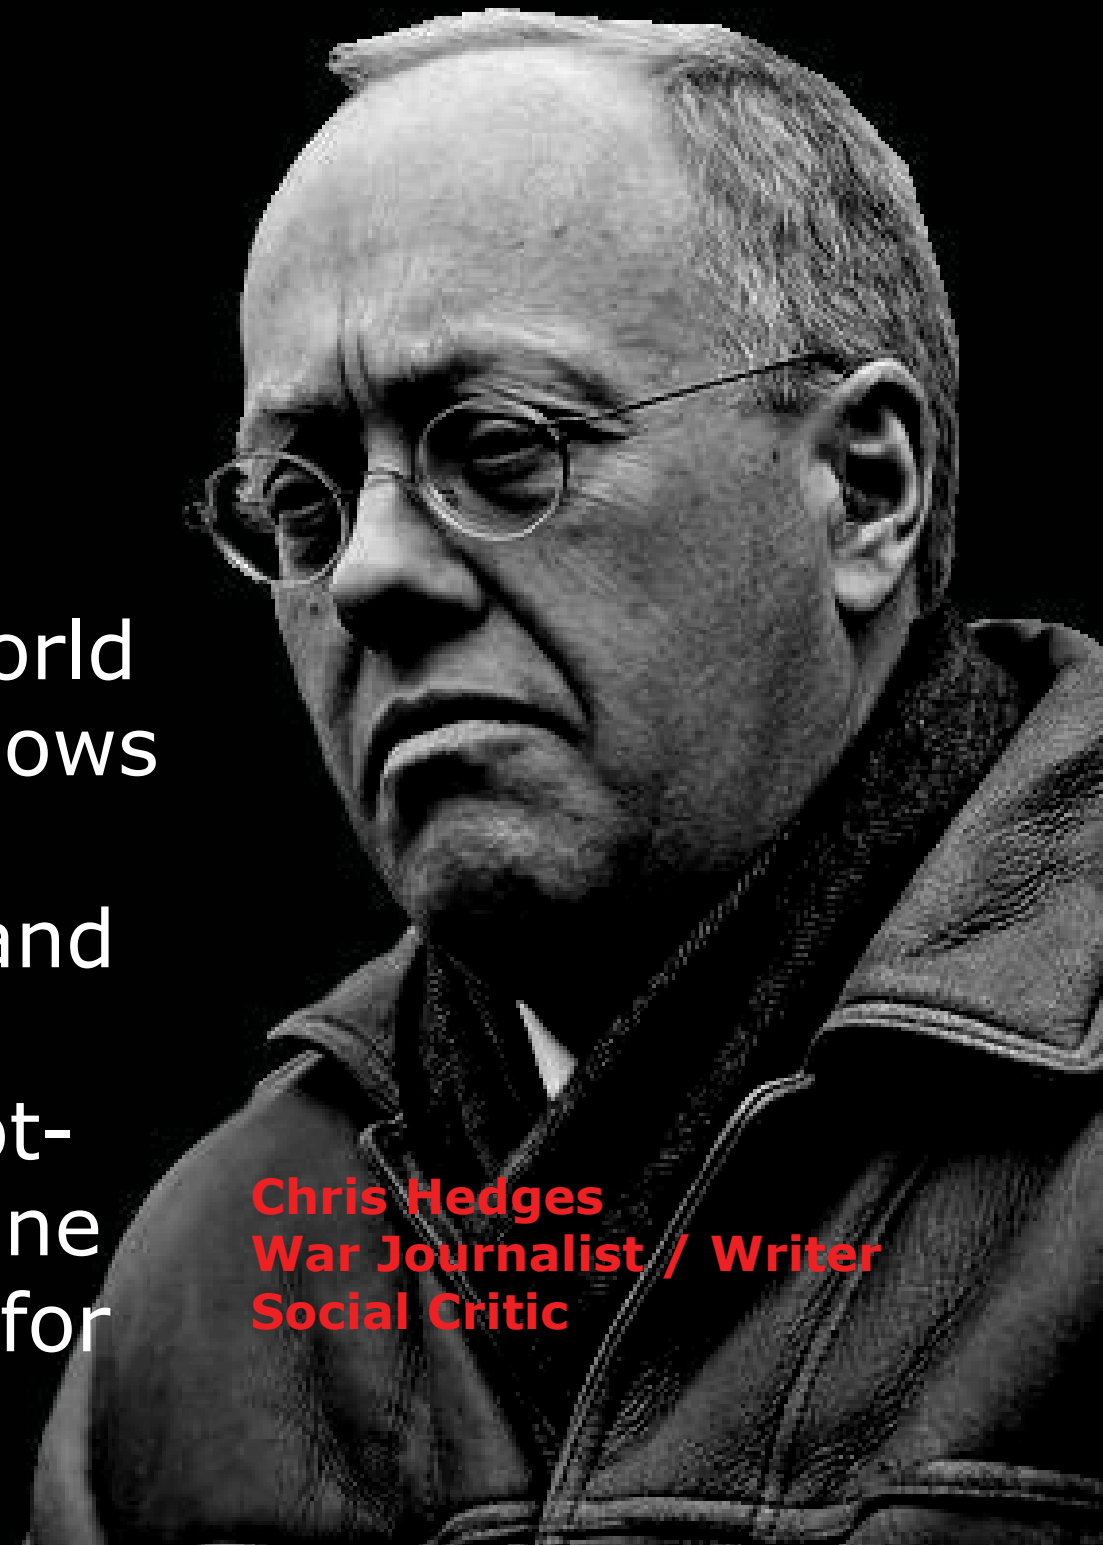

If you aren't scared and concerned yet - by the end of this documentary you will be.

Shauna Murray
Biological Scientist
University of Technology Sydney

THE SYSTEM IS GOING TO CRASH

The signs are all around us that collapse of the world we know is imminent, it's in the air - Everyone knows it instinctively. No one is saving money , everyone is saddled with debt, the stock market and crypto markets are tanking even as we speak; economist are panicking. Young people are not voting. For what? The snake is eating it's tail. Everyone finally knows that we are on a precipitous course for an huge economic crash.

Chris Hedges
War Journalist / Writer
Social Critic

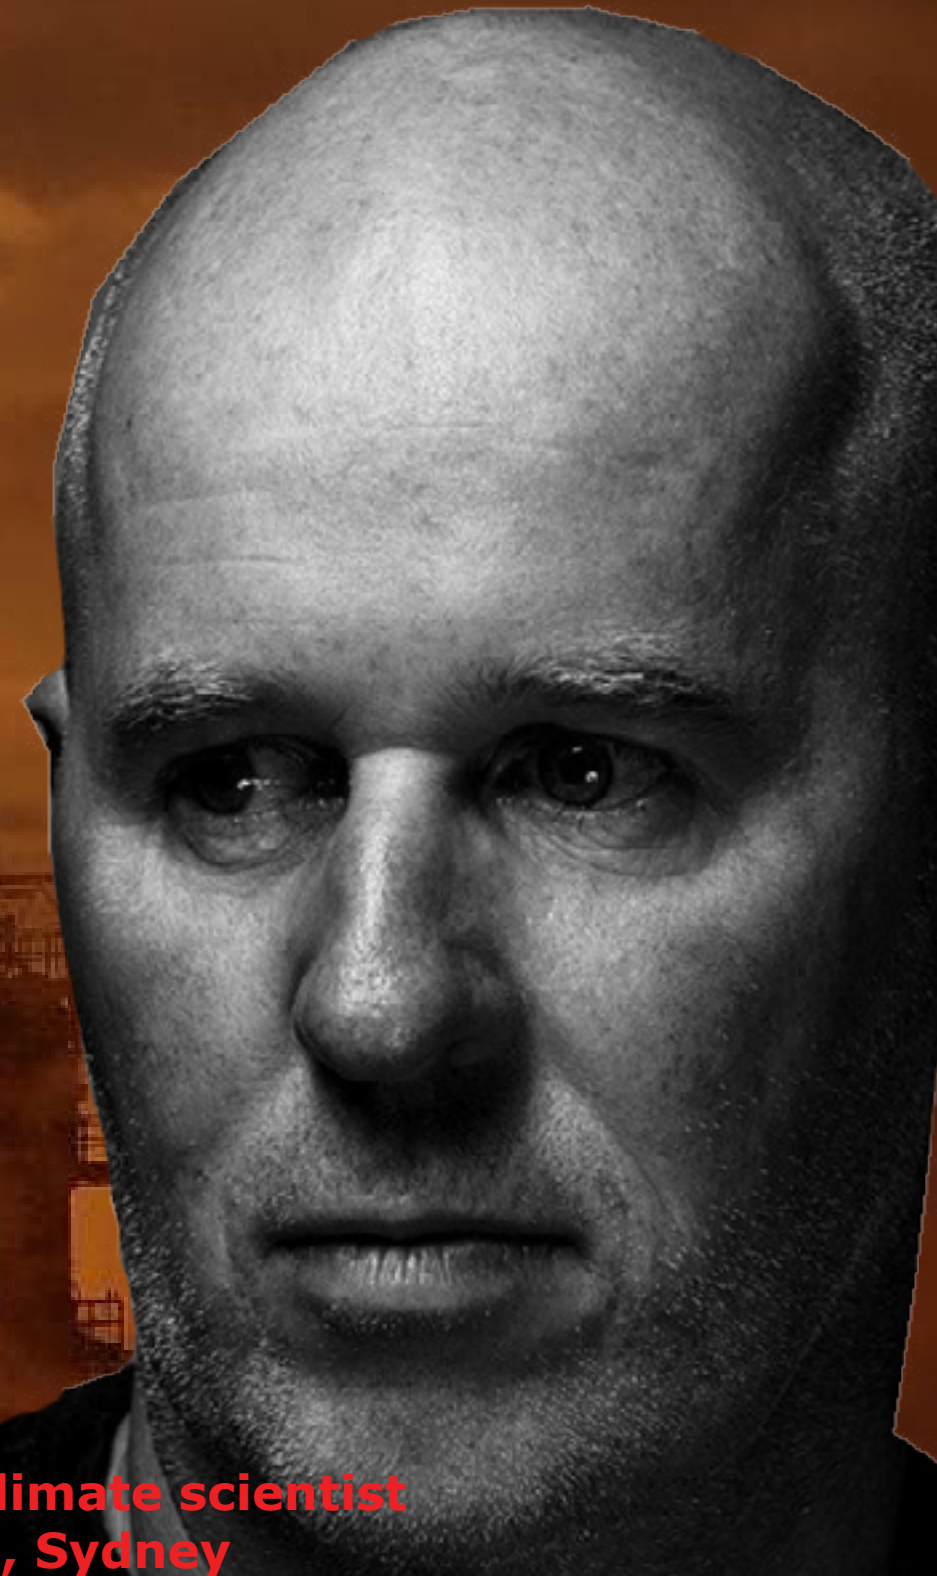

In this documentary we will assemble the greatest group of scientists and experts in the world to make a final clarion call to the world.

We will explain exactly why environmentalists have their panties in a bunch. In fact it's deeper and worse than anyone could ever have imagined and it's happening in real time right in front of us. Most of us don't even understand how much CO₂ from fossil fuels winds up in the atmosphere. It's cars, planes, shipping boats, fashion industry, mining, construction, even flushing your toilet is adding to the destruction. We will connect these dots in this documentary.

We are like crabs in the pot not realizing it is boiling over - but by the end of this documentary everyone will realize why:

THERE IS NO TOMORROW

Matthew England
Oceanographer, Climate scientist
University of NSW, Sydney

BRACE FOR THE STORM

**HURRICANE MICHAEL
CATEGORY 4
LANDFALL: FLORIDA PANHANDLE**

**One of 4 Category 4+ Hurricanes
to land on US soil in a year.**

The planet has current warmed on average
1 Degree Celsius.

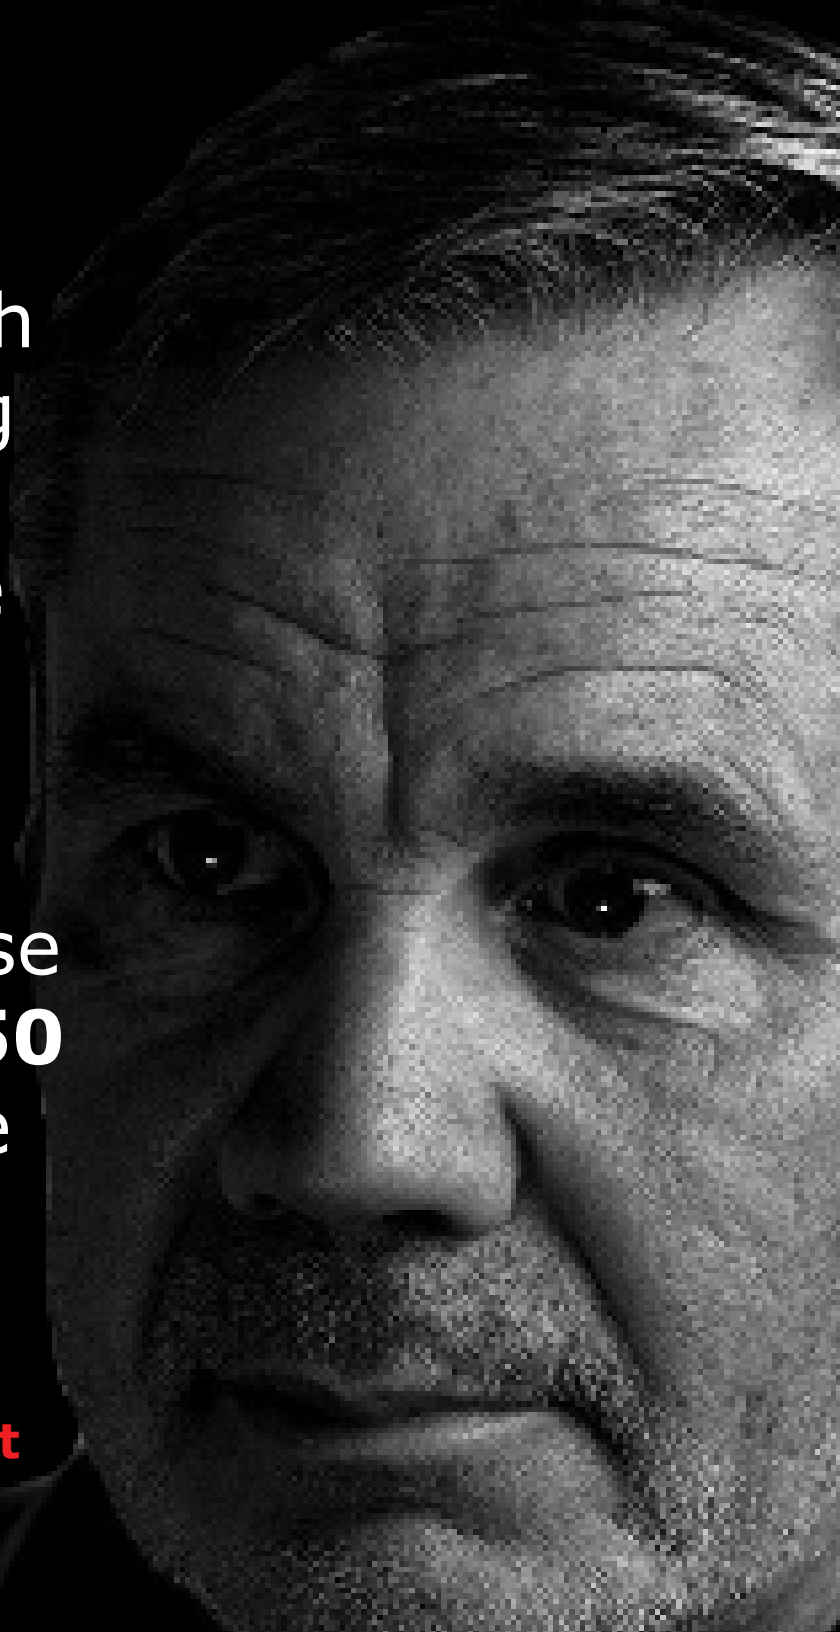

Already we can see huge storms laying waste to Florida, North Carolina, Asia. Rapid melting in the Arctic that allows shipping and military exercises to be performed there for the first time accelerating the race toward a BLUE OCEAN EVENT where the Arctic is ice free, and rapid melting in the Antarctic which is accelerating global sea rise.

Climate Scientist from every university on the planet and those who work for the government and the UN project that by **2050** we will be at **4-5 Degrees Celsius** warming and by **2100** we will be **7-10 Degrees Celsius** warmer.

This is an extinction level event.

THERE IS NO TOMORROW will show why

Will Steffen
Earth System Scientist
University of Florida,
University of Missouri

ANTARCTICA WILL MELT

Antarctica is melting at a unprecedented rate.
The entire ecosystem is upside down.

It's actually going faster than predicted. There are feedback loops that were unaccounted for. The ocean is holding in more heat, there are rivers now underneath the glaciers so that they melt from above and below.

Humanity response to the melting is to increase fishing and oil exploration. This will lead to:

THE OCEANS WILL RISE

**WELCOME TO
THE NEW NORMAL**

The ocean is slowly rising. Storm surges are higher and higher. Rivers are overflowing.

One day the tides will roll in, and never roll back out. Most of civilization lives in coastal cities. Many of these cities will be gone by 2100 or uninhabitable.

Even on the road to 2100. Many of these places will be flooded so many times that buildings will fall or overtaken by mold and impossible to live by 2050.

I'm going to miss Brooklyn. This process is speeding up thanks to:

Sarah Perkins
Extreme weather researcher
University of New South Wales

THE FEEDBACK LOOP

The reason everything is speeding up, is that additional CO_2 is coming from the plants, the land and the sea. As the planet warms up, it's causing already sequestered carbon to be released into the atmosphere.

The permafrost in the northern regions and the ocean is filled with not only millions of tons of CO_2 , but also methane - a much more powerful methane gas. It traps in warmth in the atmosphere 15x as much as CO_2 .

It's literally exploded out of the ground around the world.

THE WORLD WILL BURN

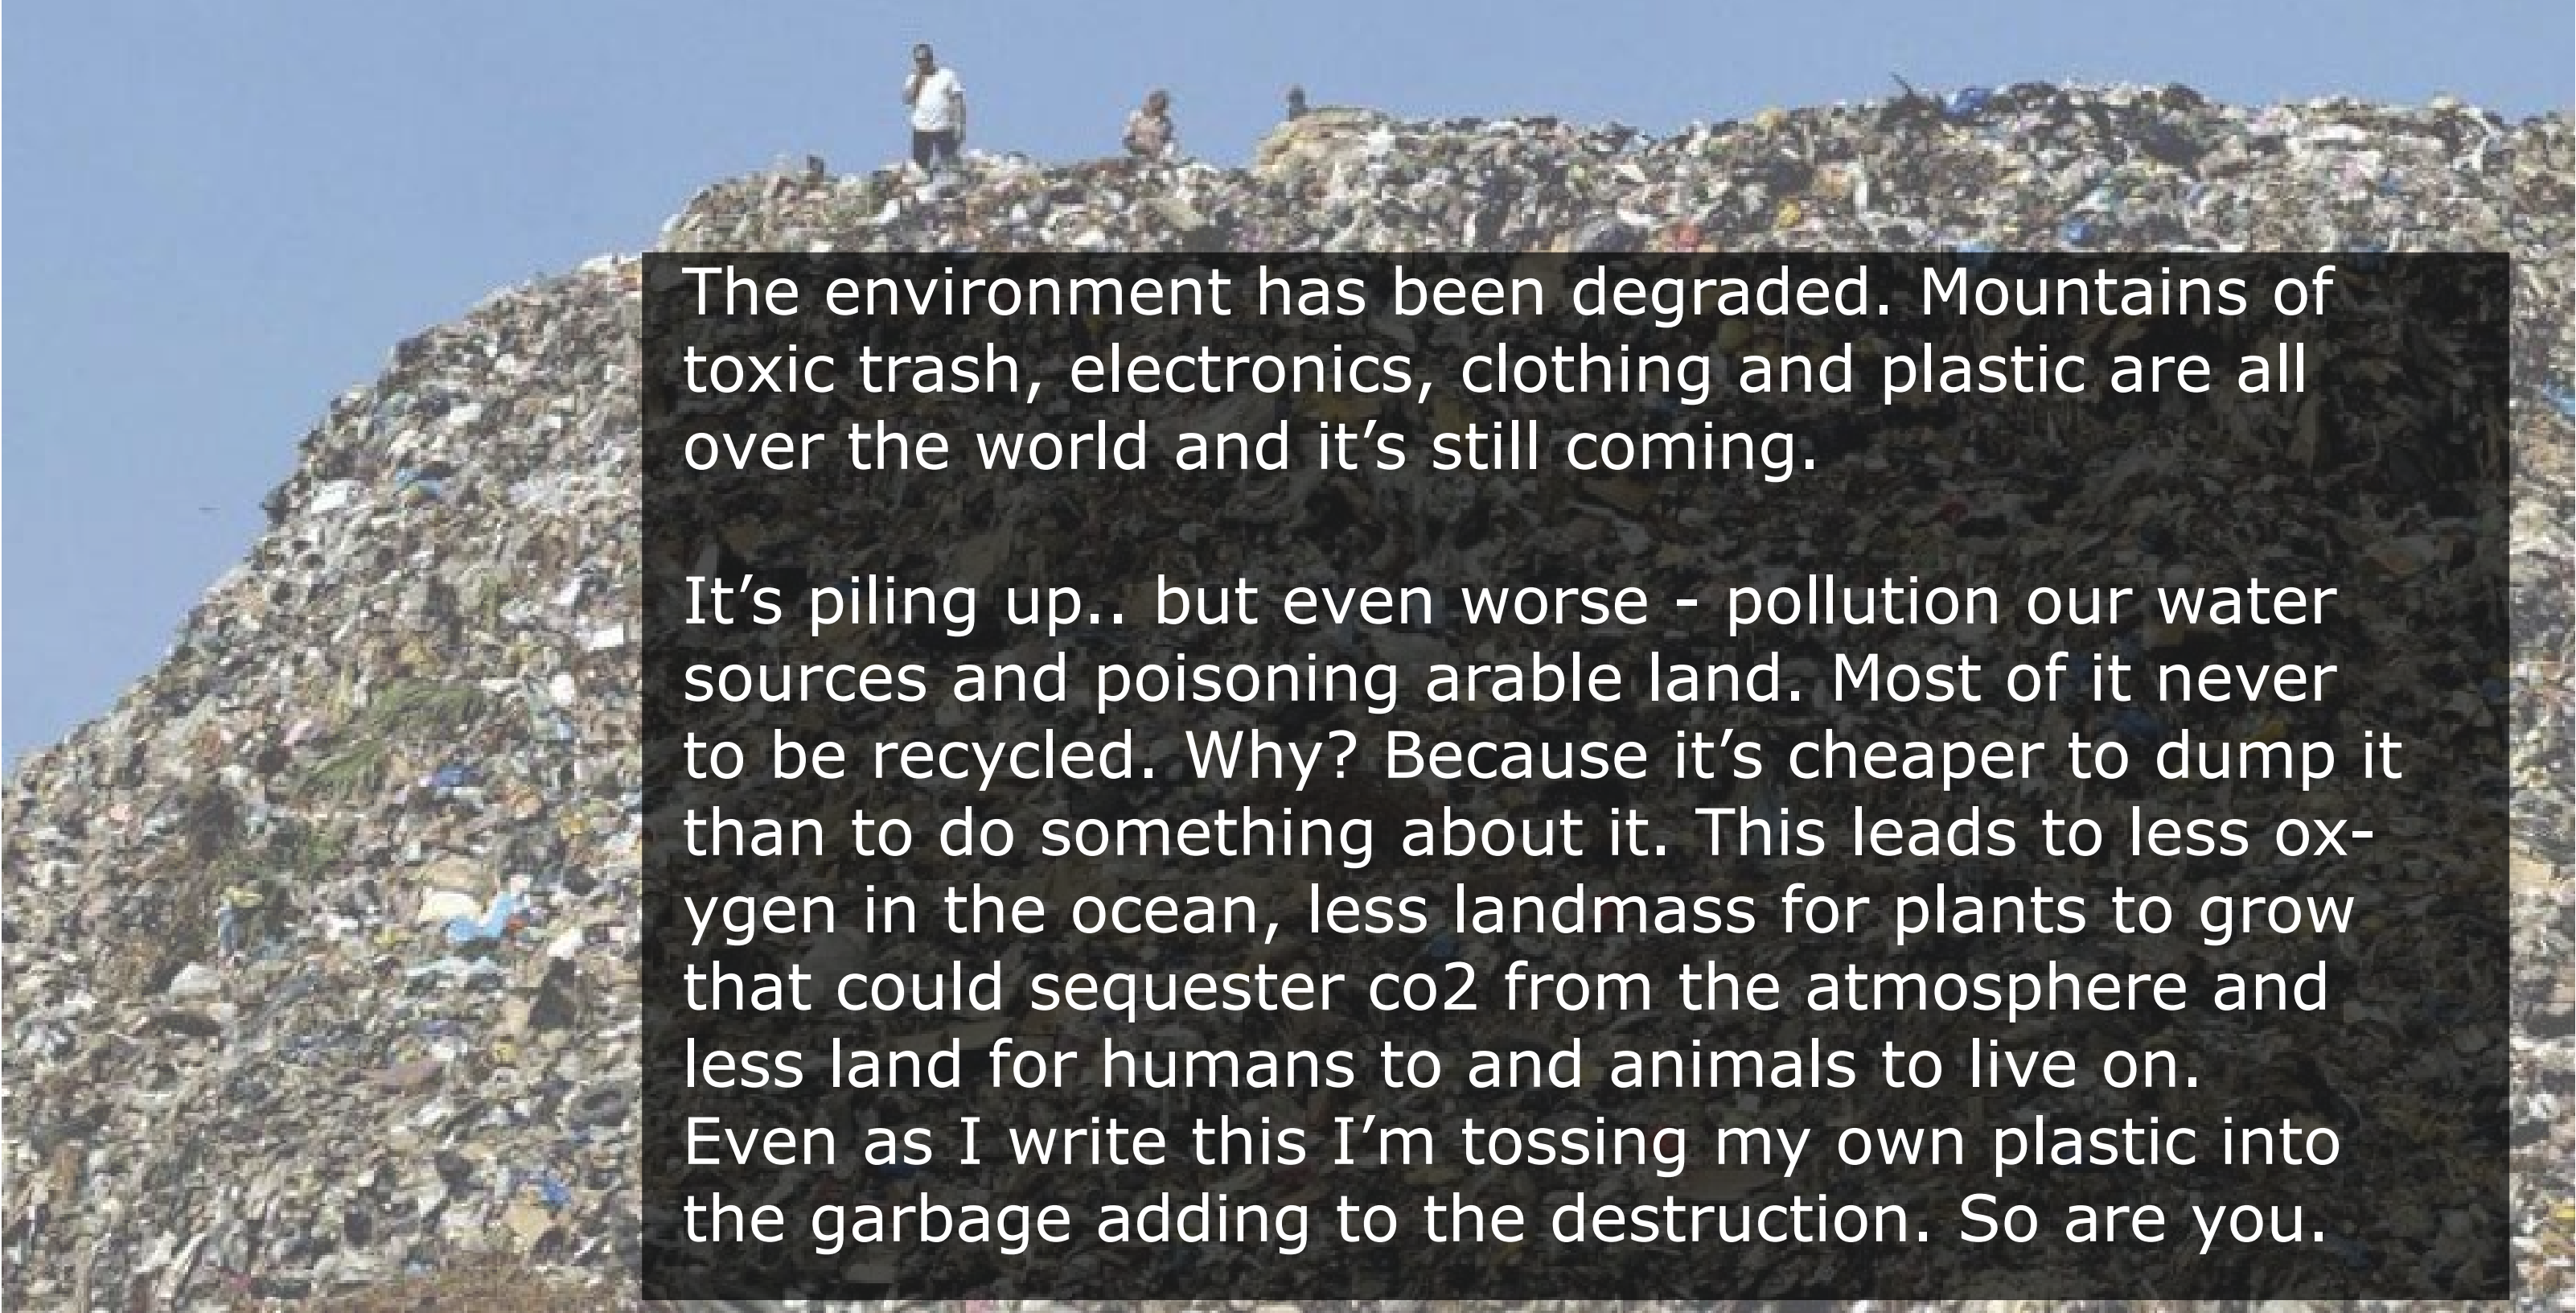

As the land gets hotter, it gets dryer. This year was a record year for wildfires. It's only the beginning.

As the fires burn, it releases more Co₂ and leaves the land with less plants to absorb Co₂. It's a feedback loop that threatens to destroy cities. The fires are so big, and there won't be enough people to stop it.

Lesley Hughes
Ecologist, Macquarie University, Sydney

**WE DAMAGED THE
ENVIRONMENT**

A photograph of a massive, towering pile of garbage, including plastic, metal, and other debris, under a clear blue sky. Several people are standing on the peak of the trash mountain, providing a sense of scale to the enormous volume of waste.

The environment has been degraded. Mountains of toxic trash, electronics, clothing and plastic are all over the world and it's still coming.

It's piling up.. but even worse - pollution our water sources and poisoning arable land. Most of it never to be recycled. Why? Because it's cheaper to dump it than to do something about it. This leads to less oxygen in the ocean, less landmass for plants to grow that could sequester CO_2 from the atmosphere and less land for humans to and animals to live on. Even as I write this I'm tossing my own plastic into the garbage adding to the destruction. So are you.

FOREVER

For ever acre that is afflicted with drought, or
burned or flooded or polluted. That leads to
less arable land to grow food on.

This of course will bring about:

Penelope Ajani
Biological Scientist
University of Macquarie, Sydney

THE FOOD WILL DIE

When is the last time you saw a Butterfly?
A bee? A ladybug?

Insects are disappearing at a rapid rate.
Without insects to pollinate them , many
more plants will die - many that
humanity relies on to eat.

But it's not just the insects, the perfect
storm is brewing of temperature increase,
droughts , flooding , storms, eroding top
soil.

Prices for food will skyrocket. If you haven't
noticed yet. You will.

Even now harvest around the planet are being reduced from the 1 Celsius increase in global temperatures. Germany is experiences an incredible drought that will change that country forever.

At 4 C this will become catastrophic for crops globally. At 7 to 10C. You get it. Even now the climate change crop failures are causing the first waves of:

Tim Flannery
Mammalogist, Paleontologist
University of New South Wales

THE REFUGEES ARE COMING

**AND NOTHING
CAN STOP THEM**

Vaclav Smil
Czech-Canadian Scientist
Policy Analyst
University of Manitoba

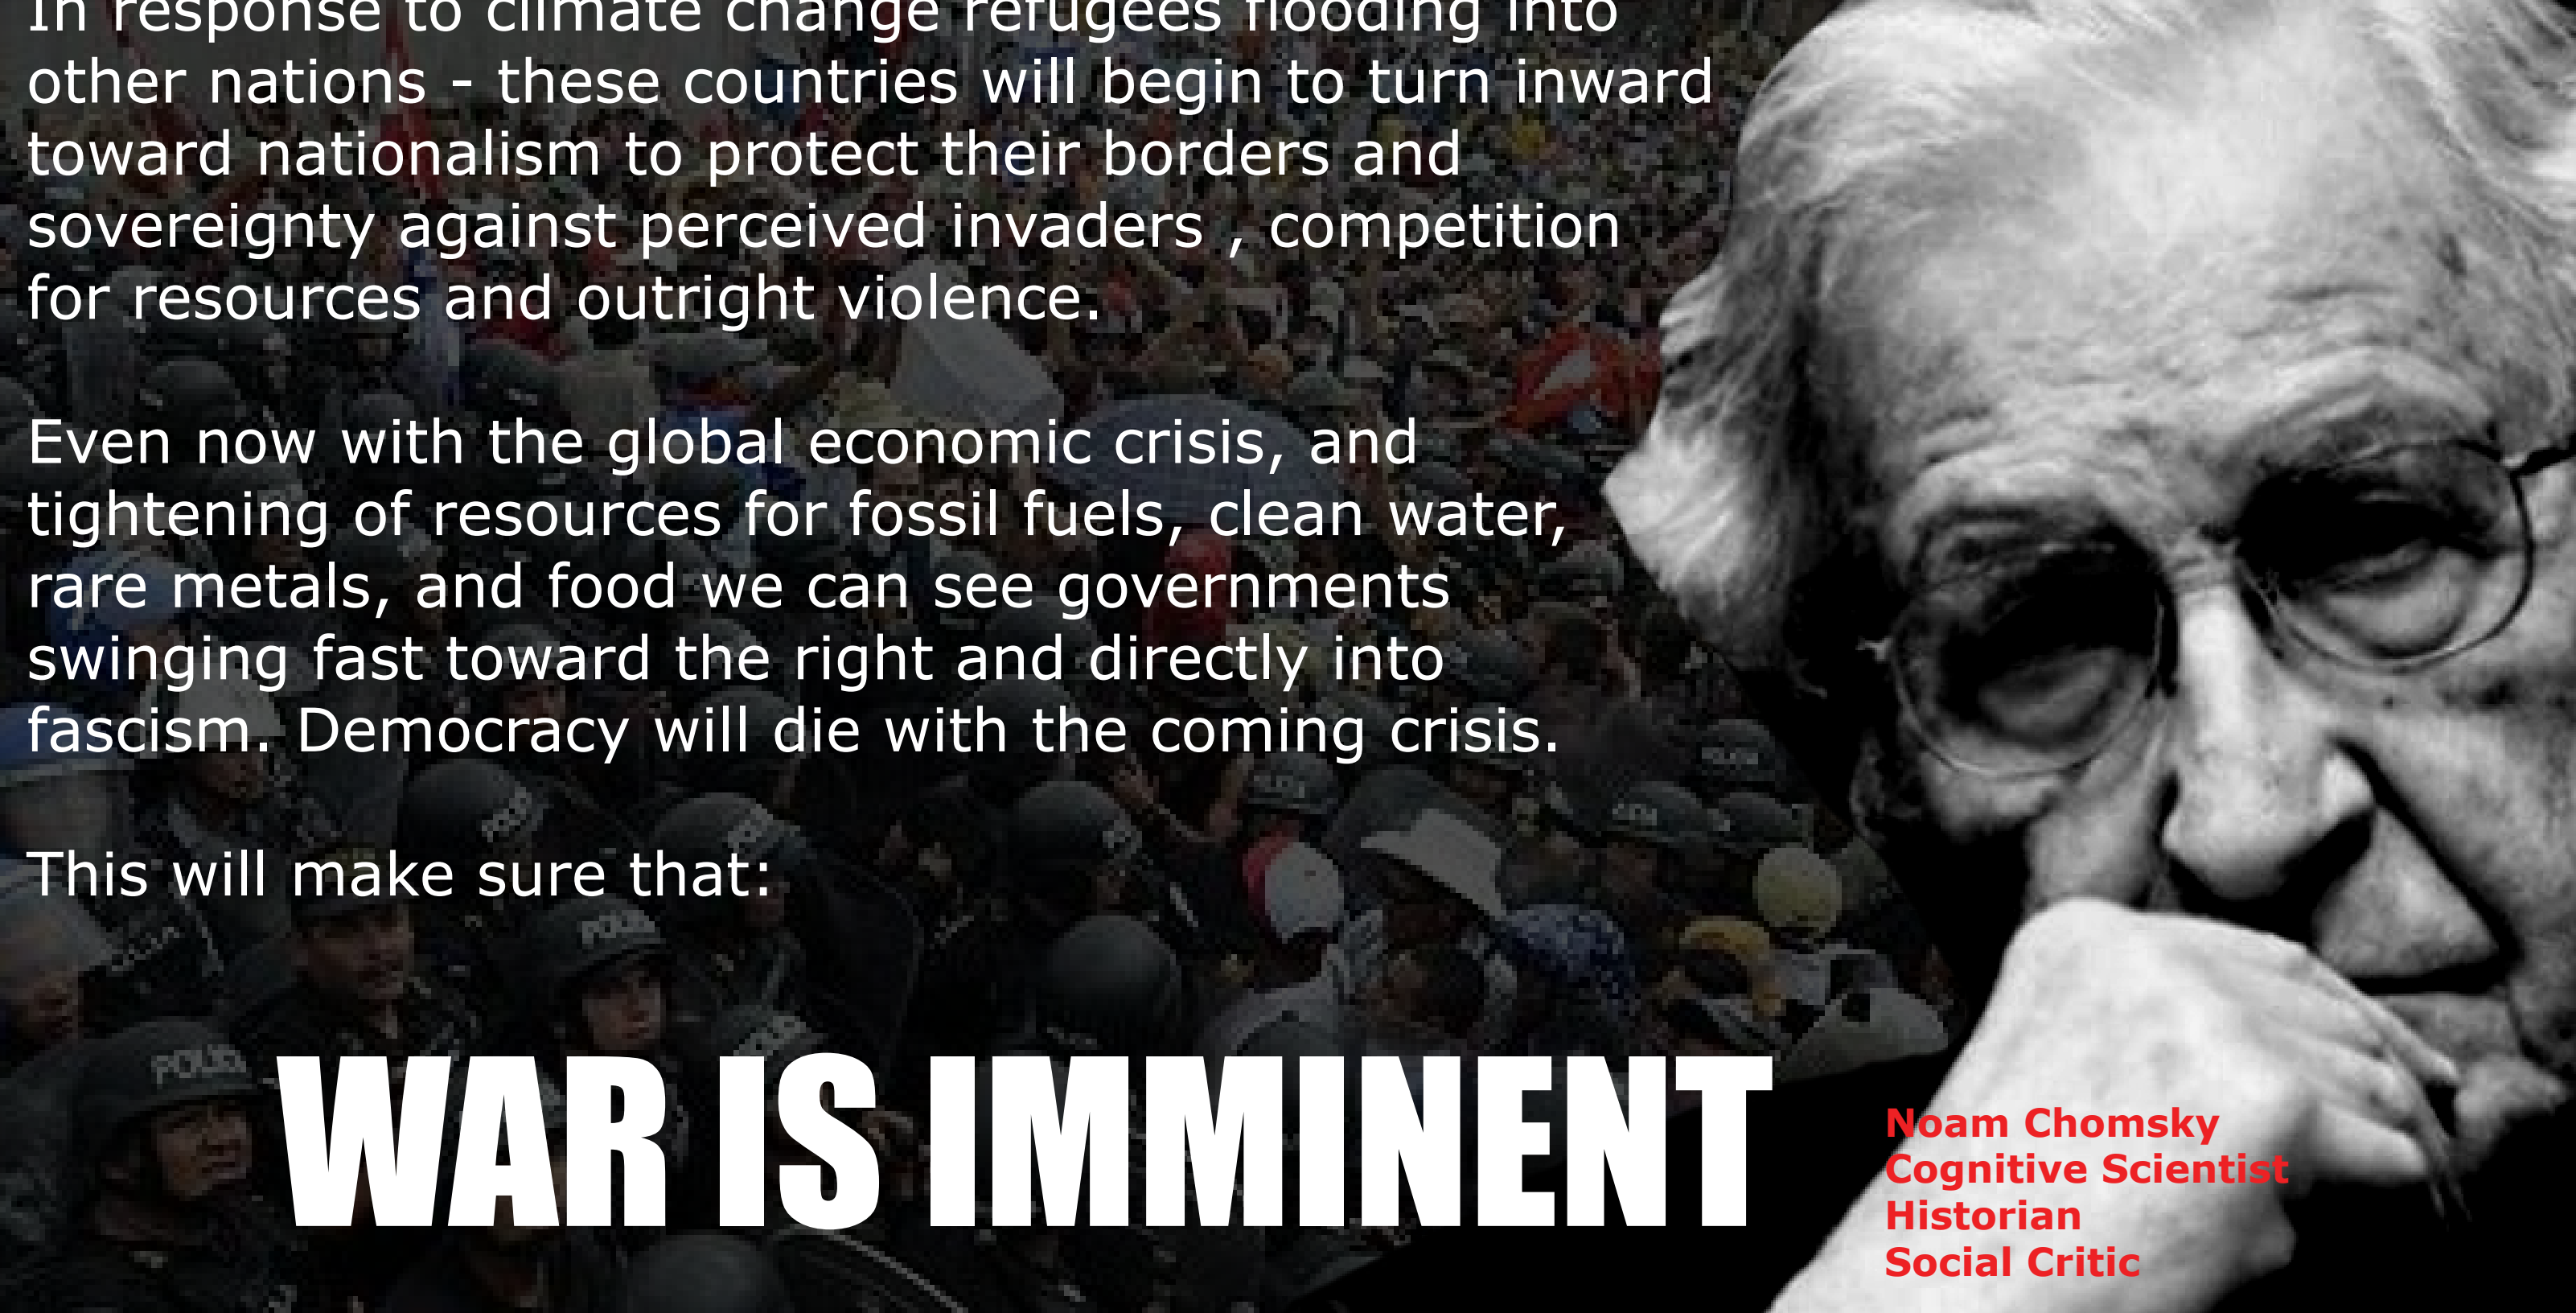

Even as you read this, thousands of the first proto wave of climate change refugees is storming toward the United States border from a drought and crop failure in Honduras.

Millions more are projected to have to move from the Middle East, India, South America, Africa and other areas that are experiencing crop failures from drought, depleted oceans from overfishing and temperature changes, just to name a few factors.

These million of people will strain the resources and social fabric till it brings the cities they flock to a breaking point. This will bring in the new political reality around the world:

FASCISM IS COMING

In response to climate change refugees flooding into other nations - these countries will begin to turn inward toward nationalism to protect their borders and sovereignty against perceived invaders , competition for resources and outright violence.

Even now with the global economic crisis, and tightening of resources for fossil fuels, clean water, rare metals, and food we can see governments swinging fast toward the right and directly into fascism. Democracy will die with the coming crisis.

This will make sure that:

THE ECO RESISTANCE WILL FORM

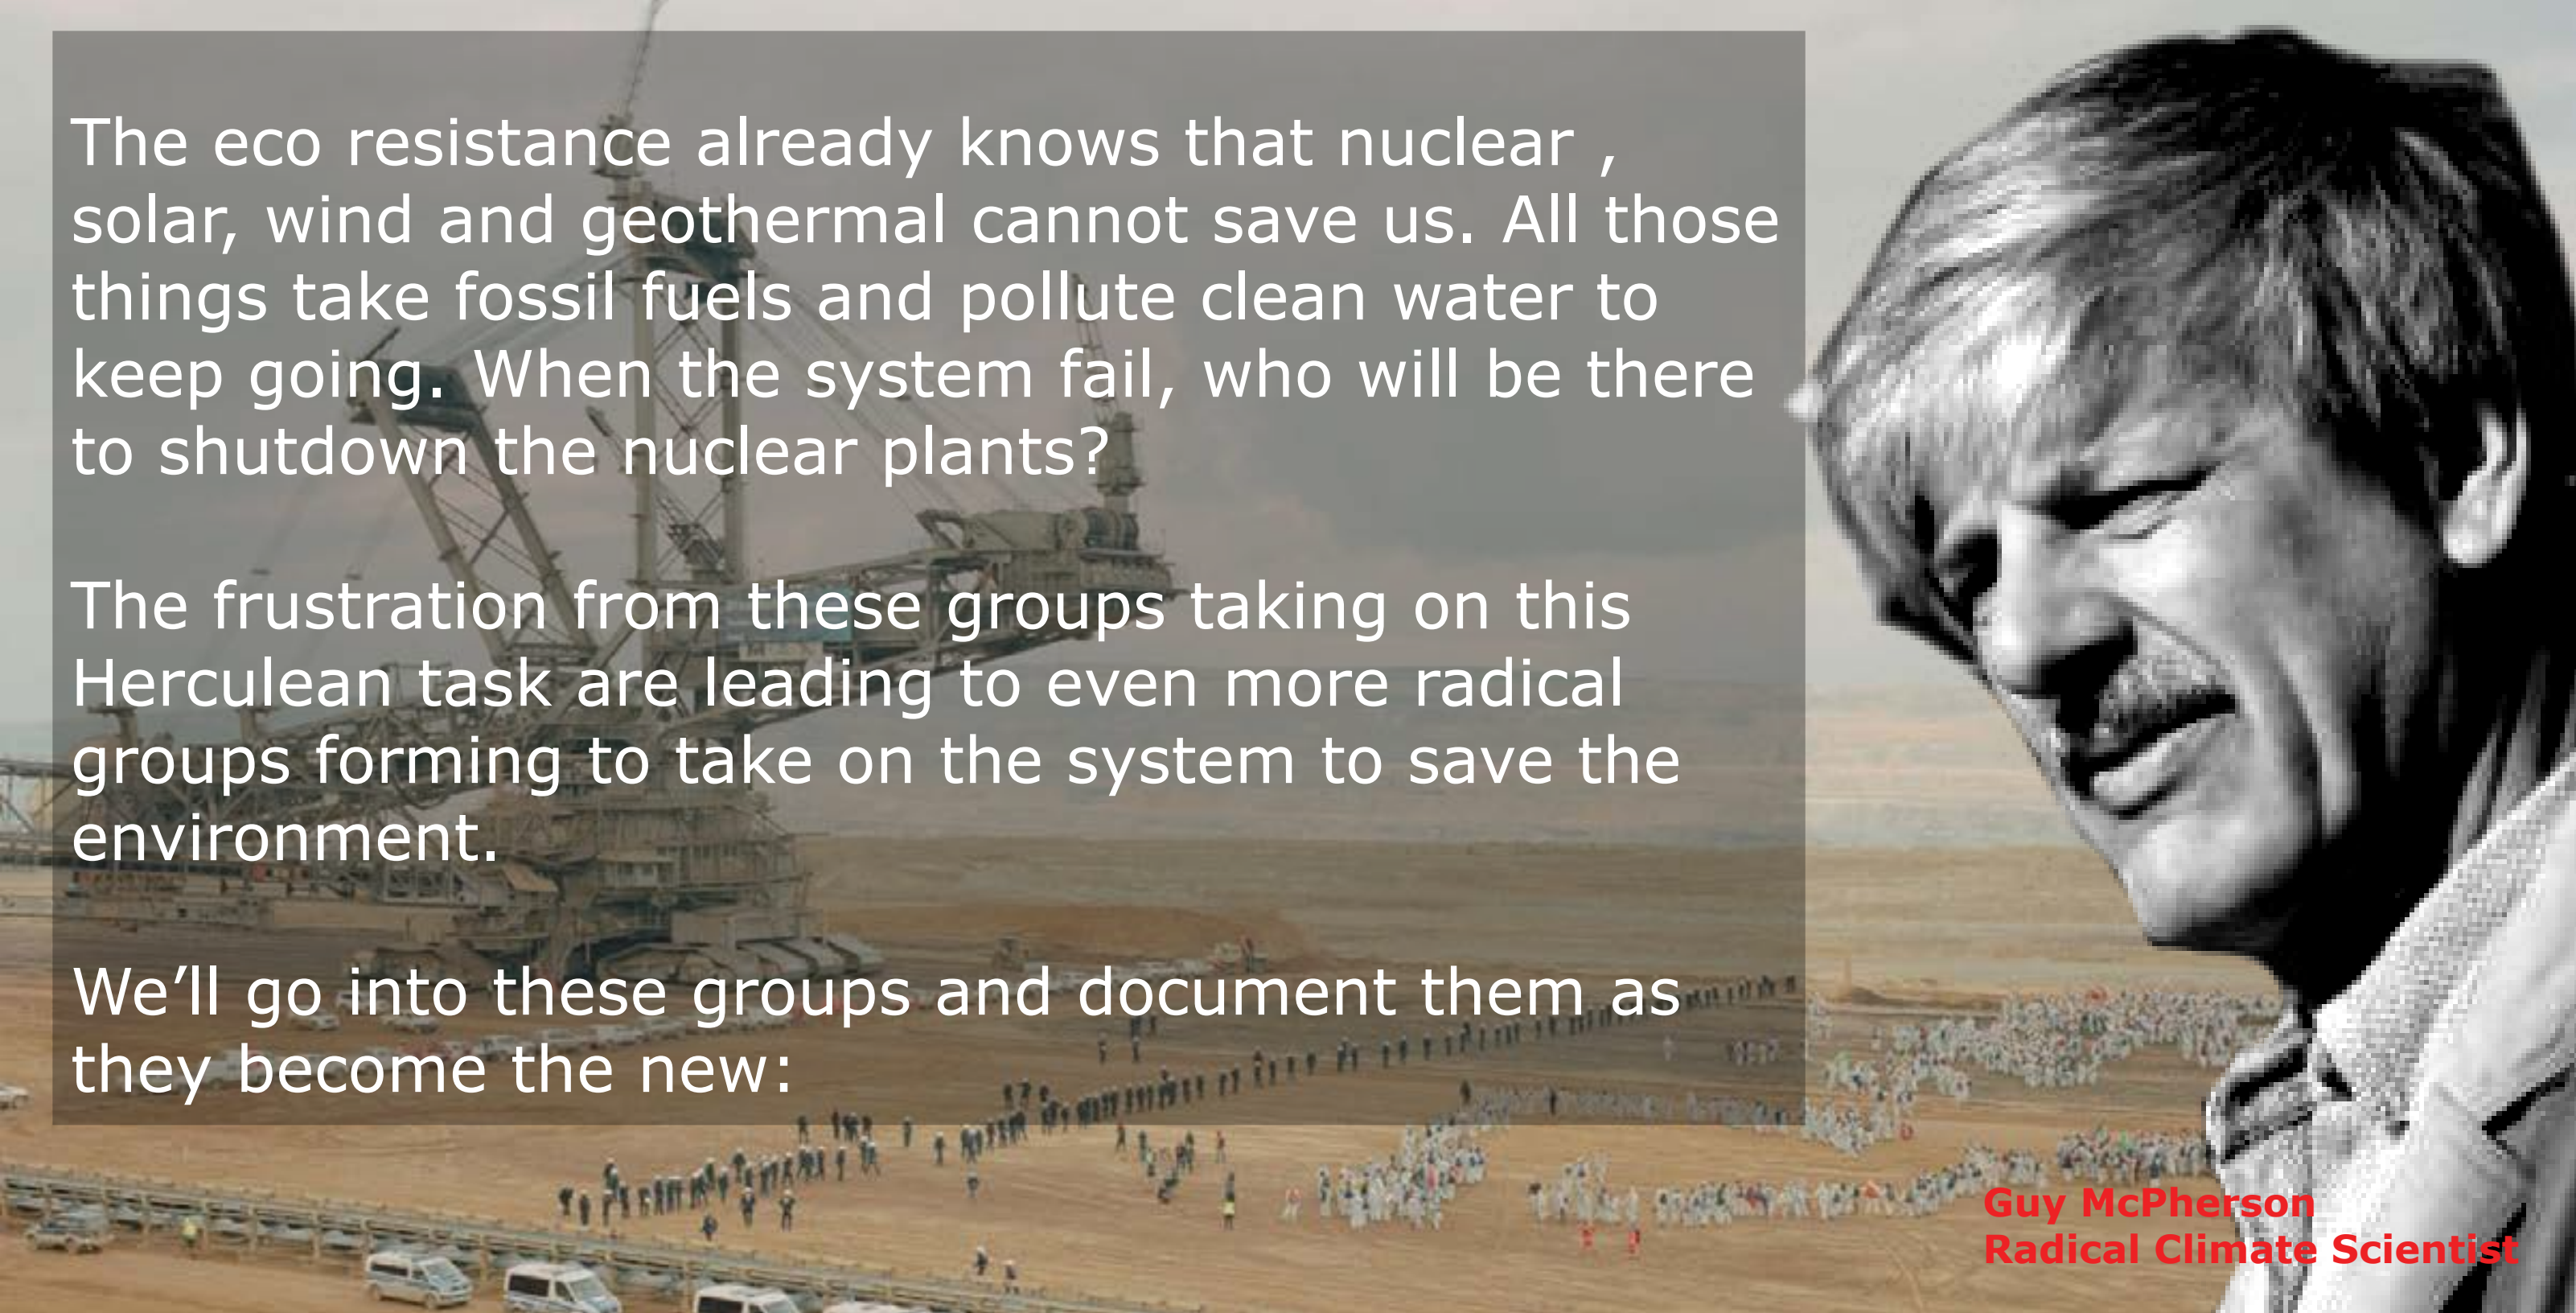

All across the world there are the first mass demonstrations and leaders are emerging realizing that radical action needs to be taken to stop what is has been deemed the sixth extinction event.

Animals are disappearing, plants - and once we get to 5 Degrees warming. Humans.

We should take a look at these movements and their leaders - we have to give the human spirit credit - even though it is doomed to failure.

The eco resistance already knows that nuclear , solar, wind and geothermal cannot save us. All those things take fossil fuels and pollute clean water to keep going. When the system fail, who will be there to shutdown the nuclear plants?

The frustration from these groups taking on this Herculean task are leading to even more radical groups forming to take on the system to save the environment.

We'll go into these groups and document them as they become the new:

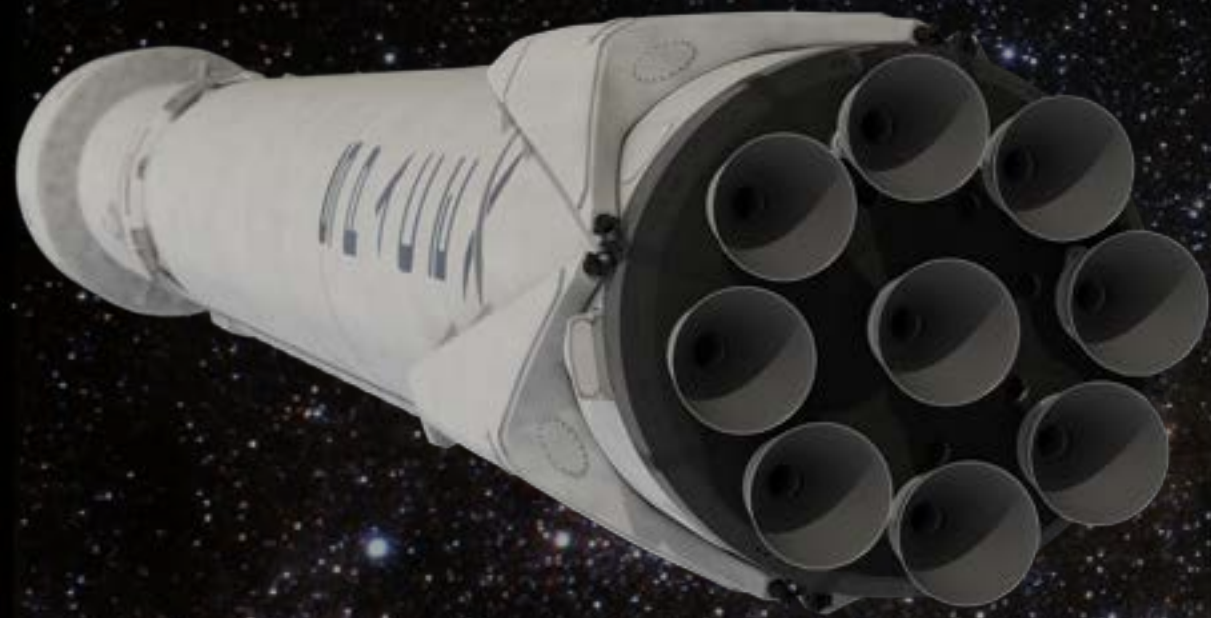

Guy McPherson
Radical Climate Scientist

ECO TERRORISTS

**BY THE WAY
WE WILL NEVER
GET TO MARS**

Some wealthy business people and some scientist who are fueled by hopium think if the Earth's environment becomes hostile we can survive on the moon or Mars.

Can we do it? The short answer is:

No.

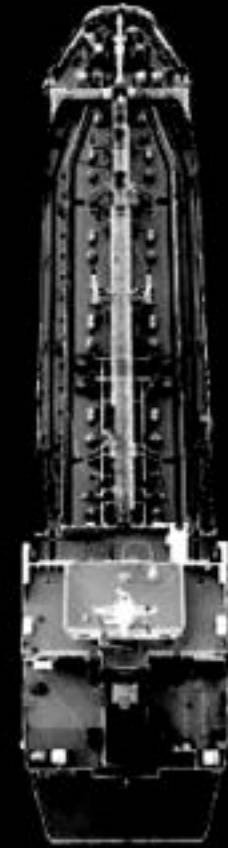

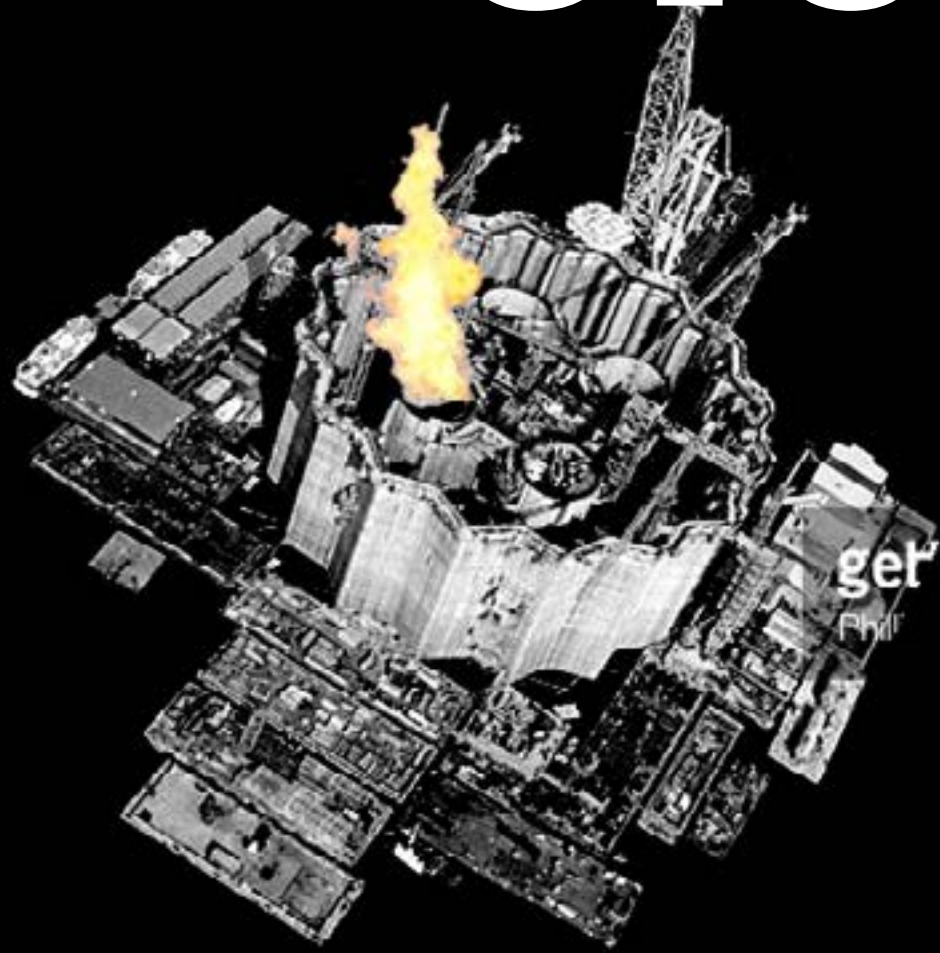

There isn't enough time left. Mars and the Moon are hostile environments. Bathed in radiation and poisonous dust and very little water. With a 27 month launch window - even if we started now we could only have 35 rocket launches to mars. The first manned mission to mars is projected to be 2050. Just as the Earth hit a catastrophic 4C in warming. We'll examine these options , but unfortunately Earth is the only planet that can sustain human beings.

We need to fix this place if we are to survive.

TIME IS RUNNING OUT

WE CAN'T AFFORD TO STOP OURSELVES

THE EARTH WILL BE HERE

WE WILL NOT

VISUAL LOOK AND FEEL

THERE IS NO TOMORROW is a documentary about the ticking time bomb in our society that's go off. I think this documentary of this magnitude needs a visual language to convey the severity of the situation.

I see executing high-contrast intense 8k black and white footage for interviews with some of the most brilliant people on the planet that are aware of the problem. I want to combine with amazing footage from the edge of the collapse of society and the destruction of the environment.

I want to insert into this story some amazing animation from **Steve Cutts** (In the cold place, man , happiness) who tackles issues of over-consumption , environmental damage, and social decay to illustrate just how dire the situation is and communicate the drill down of the subtle details about this intense subject audiences find it hard to consider.

THERE IS NO TOMORROW would tackle several intense topics relevant to right now.

- Economic Collapse.
- Climate Change and the Feedback Loops.
- Climate Change Refugees.
- Food Shortage.
- The Destruction of the Environment.
- Sea Rise.
- The destruction of animal life.
- War for resources to survive.
- The Rise Of Fascism.

THERE IS NO TOMORROW is a beautiful and unflinching look at the impending collapse and end of humanity by our own hand. There is only one shot to inspire people at this late date to avoid this fate. Imagine this documentary as a reverse of **Planet Earth** with Sir David Attenborough - showing in progress the absolute devastation that is about to befall humanity.

THANK YOU
